

The Warner Parks

The Warner Parks were established between 1927 and 1932 to preserve a unique natural area and provide citizens with outdoor recreation and environmental education opportunities. Located in southwest Davidson County in Nashville, Tennessee and administered by the Metropolitan Board of Parks and Recreation, this area is available to the public seven days a week, year-round from sunrise until 11 p.m. As a sanctuary with important historic and environmental significance, the Warner Parks are strictly protected.

This 2,684 acre Park contains wooded hills and valleys, open meadows, and wet weather springs and streams. Located within the Nashville Basin, the Parks' rugged hills and ridges rise 400 feet above the flood plains. The Little Harpeth River, Willow Pond and the Frist Pond provide permanent water sources. This western mesophytic forest region has beech-maple and oak-hickory forests, secondary growth areas, shrubby thickets, mowed and unmowed fields which provide diverse habitats for birds.

The Warner Parks' avi-fauna is mostly characterized by woodland and field-edge species including a wide variety of warblers (36 species), vireos, woodpeckers and thrushes. Sixteen species of raptors and owls are included on this checklist. Occasional shorebirds, ducks, herons and other water birds are found when conditions are good. Some species of particular interest are Eastern Bluebirds, Cerulean Warblers, Loggerhead Shrikes, and Barred Owls.

Key to Symbols

Frequency

R – Occurs regularly: should be recorded if frequent and regular trips to the proper habitats are made

I – Occurs irregularly: has been recorded in the Warner Parks but is considered rare and should not be expected

F – Formerly occurred in the Warner Parks but probably does not occur here at the present time

N - Nesting Status

* - Nesting has occurred in the Warner Parks

F – Formerly nested in the Parks but no evidence of nesting has been found in recent years

Seasons

Spring: 1 March – 31 May
 Summer: 1 June – 31 July
 Fall: 1 August – 30 November
 Winter: 1 December – 28 February

The Checklist

This listing of 185 birds is compiled from observation records judged by the Park naturalist as accurate. It follows the order of the 6th edition of the A.O.U. checklist. Park visitors are encouraged to report all observations to the Nature Center staff. This list is not final and all corrections and additions are welcomed.

___ Evening Grosbeak	R		R	R	
___ House Sparrow	R	R	R	R	*

The Nature Center is a year-round environmental education facility. Bird hikes and other nature study programs are regularly scheduled. Visitors are welcome to hike the trails, explore the exhibits at the Learning Center or stroll the edge of the teaching pond. Park maps and literature are available at the Nature Center Trailhead and in the Learning Center.

The oldest continuously operated Eastern Bluebird nesting box program in Tennessee was started in the Warner Parks in 1936 by nationally known ornithologist Amelia Laskey. Today this research is continued by Nature Center staff and volunteers.
